PIGS and calves thrive and grow fat when fed with warm, skim milk. You cannot get warm skim milk to feed them unless there is a cream separator on your farm. There is money enough in this one advantage to pay for a cream separator the first year. This is especially true if you buy a close skimming, durable International Harvester cream separator—Lily, Bluebell or Dairymaid. These separators have all the points which make cream separators good. They have the balanced bowl, the self-adjusting neck bearing, the tool steel spindles, the bronze bushings, the spiral gears, the low supply can, the high skim milk spout, and the open, sanitary base, without which no separator can be satisfactory. Some dealer near you handles I H C separators. If you do not know, write us and we will tell you who he is. We will also send you our cream separator book which tells you why it pays so well to buy an I H C separator.

Alfalfa Essentials.

Alfalfa, the ideal dairy hay plant, can be grown in almost every locality in the country if the soil conditions are made right. First, the soil must be well drained. If it is not it is useless to sow alfalfa.

Next, the soil must be rich; if it is not naturally so, it can be made so by barnyard manure.

Next the soil must be sweet; if it is not it must be made so by using lime in some form. If the soil is only moderately acid, it may in many instances be sweetened up by using stable manure.

So if you have a soil well drained, fairly rich and not too sour you can grow alfalfa and save a big mill feed bill.

Alfalfa has been put in the silo with fairly good results but we do not think it will pay to use alfalfa as ensilage. Alfalfa will feed out in the form of hay without waste, which fodder will not do, and it seems to produce about as much milk, fed as hay, as if it were made into ensilage. The ideal ensilage is made of corn or kafir.

I know of nothing so quick to relieve a cough or cure a cold." For sale by all dealers. Adv.

"There were giants in those days." There are giants in these days also, if we will only look around us and observe them. One of the handiest of these modern giants is the gasoline engine or tractor. The giants of old were supposed to be very large, and able to do the work of five or six ordinary men. This modern giant will not only do the work of several men, but of several horses as well. He will run your separator, turn your churn, saw your wood, pump your water, cut your fodder, grind your corn, plow your land and many other things. The ancient giants were troublesome, hard to manage, and great eaters. The modern giant is tractable, always handy, always ready and willing to work, never gets tired, never runs away when you want him most. He is kept at very little expense. A drink of gasoline, or kerosene, when he is thirsty, and a little oil is all he needs, and that only while he works. Such a giant is a handy thing to have around, for at a touch you can rouse him to life and activity, ready to do your slightest bidding. —Thomas Owen in Kansas Farmer.
